1 = only part of this data is available now in the lab.
(it may be misplaced)

2 = there is data in the files for Zutphen, but it is not identified by any date and records show that no data is available in the lab for this area.

3 = there is no date on these records.

4 = Norris identified these as 10 year Tanushimaru.

5 = some records are dated over one year later than others,
Dr. Keys says for his purposes this is okay.
