Prof. Eugene Lepeschkin
University of Vermont School of Medicine
Burlington, Vermont

Dear Dr. Lepeschkin:

You mentioned in your first volume on "Modern ECG" a systematic attempt to classify ST-T findings in bundle branch block as normal or pathological according to QRS duration and heart rate.

What luck have you had with this and can you now suggest or have you developed a simple classification system?

Cordially yours,

Henry Blackburn, M. D.
