Dear Henry,

We had a very useful little meeting here last week to discuss a collaborative trial and I thought you might like to see the documents recording our agreements and decisions.

The prospects for a strong group and a large trial (20,000 men) in Belgium seem to be very good. Warsaw is keen to collaborate but probably on a fairly small scale and hoping that we shall do their computing for them. Alessandro is hopeful but I have the impression that he has to fight his battles alone.

Kind regards,

Yours sincerely,

Professor Geoffrey Rose
