Dear Doug:

Keep in touch. I'm sorry we didn't have that good discussion we promised ourselves, about what you were finding out about yourself. Let's have it at Christmas. I hope the diving experiment was useful to you.

Enclosed are a few more, simple, superficial but striving, ideas about prevention.

Have you read the address by Donnell Boardman in the 5 September NEJM?

Regards,

Henry Blackburn, M.D.

Omaha/Dutch MS-

Dear Dr. Blackburn, W.P.P.

My apologies for not getting this to you sooner. There should still be enough time to get the abstract in to ACC. After going over the results again I am encouraged that there are some important conclusions. - please read my discussion section + see what you think - feel free to change or add your own text. I am not that happy with the abstract itself - abstract writing seems to be a difficult game - If you ~~would~~ would like to rewrite it I ~~would~~ would be grateful. Would you make sure that Jackie sends me + Scott copies of everything - addresses are enclosed. - Thanks

I am still working on RP's project down here + I will get results - you could tell him that.

Many thanks for supporting me this summer - it was every bit as valuable to me as the lab has always been. Hope to see you at various times throughout the year.

OVER

Sincerely, Doug
