Dear Henry,

After a week in Swedish rain and cold I really appreciate my stay in Corfu and Greece. The first part of it was wonderful with nice weather and best of all our long discussions about important problems.

When you left Corfu the weather changed and a slight confusion spread among the participants. Our conferences stopped and my bowel behaved badly. It was possible for me to have a short but worthwhile discussion about methods with Ancel Keys.

I have now read your comments to my work and I like them very much. You have helped me very much and I am grateful to you. Our pilot-study of the work performance of the building workers will start within two weeks and I hope it will give experience of value for 1967.

Is it possible for me to get reprints of your work in the cardiovascular field from your laboratory? I am very much interested in the Acta Medica suppl.

Here are some of the references I promised to give you

Quantitative measurement of proteinuria

Piscator, M. (1962) The application of quantitative and qualitative methods of protein determination for demonstration of cadmium proteinuria. Arch. Environmental Health 5:325-332.

Börje Löfstedt Human Heat Tolerance

Experimental studies in prediction and estimation of heat, stress and strain in unacclimatized subjects with special reference to physical working capacity, sex and age. Lund 1966.

A book about the viking Orm which we discussed together with Adrianos is also included. I will send you the Bibliography as soon as possible and other references later on.

Best wishes to you and your wife
