Dear Tomi:

I am overwhelmed with the speed in which you forwarded the material to Dr. Stamler and provided our needed information. I will attempt to match it in getting you a first draft of the first paper.

I haven't digested the data yet, but at first glance I am a bit disappointed, and don't quite understand, the poor sensitivity of I, F, V4.

Anyway, many, many thanks.

You also, as usual, helped us get unblocked on another problem, and I enclose Ohno's findings of the mortality ratios by ECG item in our international study.

Dr. H. Tsukamoto's visit was pleasant. He is a rare phenomenon in life insurance medicine--ambitious and a good researcher.

Regards,

Henry Blackburn, M.D.
