Dr. Henry Blackburn
Professor and Director
Laboratory of Physiological Hygiene
1-321 Health Science Unit A
Campus

Dear Henry,

Many thanks for your kind note. Sally and I are delighted to learn that you found our book interesting.

Sally and I have been away spending a few days in Phoenix and visiting with Steve and his family in Tucson. Steve was insistent that I should see their Chief of Cardiology, Dr. Frank Marcus, who has been much in the news recently for development of antibodies against over-dosage of digitalis.

He had some x-rays of my chest taken and did a cardiogram on me which, I would infer, corroborates your prior findings. He would appreciate receiving from you a copy of your most recent cardiogram (EKG), together with your interpretation thereof. He would also value having from ^{you} a report on the x-ray findings, if significant, of my chest radiographs.

I am so heavily indebted to you on so many scores, I hesitate to ask this favor of you, but both our son Steve and our new acquaintance, Frank Marcus, would appreciate receiving from you the desired information, for which also I shall be very grateful to you. With many thanks, cordial good wishes, and best wishes for a 1981 which exceeds your finest expectations from Sally and me.

Sincerely,

Owen H. Wangensteen, M.D.
Regents' Professor Emeritus
Department of Surgery
