Dr. Ancel Keys
Laboratory of Physiological Hygiene
School of Public Health
Stadium Gate 27
Minneapolis, Minnesota 55455

Dear Ancel:

Circumstances have come up that will prevent me from getting to Pioppi in September. I shall have to go to meetings of the International Cardiology Federation in Geneva on the 13th and 14th and we are elaborating that conference a little more than recently planned in order to make it worthwhile for some of the national foundations which will be present. We want to get at least two or three of the more active councillors of the ISC to be present to talk to the laymen and doctors who will be there in Geneva about what is going on in their special programs, and we very much hope that either you or Jerry Stamler can come to speak to us for, say, half an hour on what you folks have been doing and are doing and planning. This will greatly interest the audience large or small that we may have and may be essential for our future.

I shall ask the other councillors also to do this although probably not more than two or three can because of time and expense. However, I shall arrange to pay the expenses of those who come by this special invitation of mine (not from ISC-ICF funds).

Ina also regrets that she will not have the reunion at Minnelea with so many of our old friends and new ones.

Sincerely yours,

PDW:fa

P.S. I am arranging to send to you a grant of \$1,000 from my coronary research fund at the MGH for your Council, to help pay the expenses of the seminar in Italy this September.
