Professor Jean Lequime
91, Av. Franklin Roosevelt
Brussels, BELGIUM

Dear Doctor Lequime:

I have advised Dr. Keys that I consider the present application of computers in cardiovascular research is sufficiently important and operational that its consideration is appropriate to a symposium at the Delhi meeting. I will attempt, and request your help, to better acquaint myself with work outside the U. S. A. in the field.

The pioneering work in analysis of pulse waves, pressures, dye curves, ECG and phono. would best be covered by Earl Wood at Rochester, Homer Warner at Salt Lake, and C. Caceres and H. Pipberger in Washington. M. Okajima or someone from Nagoya would be useful. Epidemiologic cardiovascular data processing could be presented by our group and Rautaharju could summarize effectively.

Best regards,

Henry Blackburn, M.D.
