Dr. Loring B. Rowell
Department of Medicine
University of Washington
Seattle 5, Washington

Dear Dr. Rowell:

I regret that your manuscript has not been found acceptable for publication in THE JOURNAL OF APPLIED PHYSIOLOGY. The editors were unanimous in challenging the assumption that superior vena cava blood represents drainage from inactive regions. Your short section on results did not emphasize the negative correlation coefficient between total oxygen uptake and superior vena cava oxygen content which I judge to be a justification.

The comments of the editors are enclosed.

Sincerely,

Loren D. Carlson
Section Editor
American Physiological Society
