B

file.

Your unfortunate term "second-class citizen" in the MHS meeting was misinterpreted by Dave Snowden. It would be useful if you would help work out the issues of the different perceptions of use on the VAX computing system, quietly with Stan and Lael and Dave and then let's talk about it again at the next meeting. I guess I didn't realize that you were so strongly against any unfunded research done on the computer, since you are kind enough to head up the student use of the computers. But, we've got to develop a system that's economically responsible and legally valid and will accomodate some teaching and project development analyses.

HB:st

P.S. composed before your thoughtful,  
if strong view, was summarized  
by memo.
