Dear Colleague:

We appreciated your visit to the School of Public Health and have enjoyed our contacts with you on the Search Committee for Vice President, of Health Sciences, and others.

I have sent a letter of explanation of the enclosed Update 1990 from the Division of Epidemiology in the School of Public Health to Provost Kuhi, with a detailed message about the humanitarian and practical benefits to this region of our research training program. We think research in public health provides a bright potential for the future and needs the broadest understanding and support of Central Administration and the leaders of our University.

Cordially,

Henry Blackburn, MD
Professor and Director
