

P.S. Sometime I would like your opinion on Marcia Angell's Editorial "The interpretation of Epidemiological Studies". It appears scholarly but I think she 'over-does' the right of autonomy of the patient in decision making. With the change in attitude of many, with medical care as a right, there is a linkage to responsibility in avoiding things that increase medical costs - (current (Sept 20) N.E.J. Med.)

Sometime I would like to discuss the women activists attack on NRFIT - Personally I think Rep. Patricia Schroeder and Columnists Ellen Goodman say some silly things but maybe the results OK - I noticed that there has been a Women's Health Office established in N.H. ✓

Sept 15

Dear Henry,

Margaret and I appreciated being included in your "retirement" (change in direction) party and enjoyed the evening greatly. I was pleased to see your colleagues praise your leadership. -

I wondered whether there might be a portrait behind the veil, on the easel and I expect you liked the water color better.
Regards to Stacy, with respect & affection -
Howard Bruner
