Dear Al:

This is a sequel to my note about the John Snow Award. I have just gotten around to your marvelous Circulation Editorial of September 1987. It's Fantastic!

If you have the LRC data on lack of "deleterious sequelae" with markedly lower cholesterol values I would love to see them. We're putting together a small group, probably in the Fall of 1989, to discuss the purported associations of low cholesterol values with disease risk. I hope you would be willing to participate if I can raise the enthusiasm and money to do this.

Cordially,

*Henry Blackburn*

Henry Blackburn, MD  
Professor and Director

✓ bcc: Rick Shekelle: Rick - I hope you, too, would participate
